

The ESA Business Incubation Centre (ESA BIC) Hessen & Baden-Württemberg was founded initially in Hessen as ESA BIC Darmstadt in 2007 and is managed by Centrum für Satellitennavigation Hessen (cesah). In 2018 the centre was enlarged to include two new incubation locations in the German state of Baden-Württemberg, in Reutlingen and in Friedrichshafen area, managed by IHK Reutlingen and AIRBUS DS. We support innovative startup companies in technical realisation and market implementation of new products and services applying space technologies.

ALL4IP TECHNOLOGIES

ALL4IP TECHNOLOGIES is an early stage, high potential, growing engineering company.

The challenge

The system continuously detects the range possibilities in all directions and supplies valuable information to the users mobility plans. The map display is adjusted to the electro mobile ideally, so pedelec drivers can see the bicycle paths and electro vehicle drivers can see highways. The calculations include rangy ground and local wind situation. Users can see in advance , how their electro mobile will respond to ascending or descending slopes. The optimal energy-technical route is shown. mapZero converts all these eff ects into topographical reachability. According to all these facts, the shown accessibility on the map will change. Ideal for a trip with the electrovehicle.

The solution

ALL4IP TECHNOLOGIES is hosted at ESA Business Incubation Centre (BIC) Darmstadt, run by the German company cesah. This has provided the opportunity to consult ESA experts who have supported with technology insights and ideas to improve the system.

In addition, especially the support provided by cesah in relation to general business activities has been very helpful.
