About SYSVEO

SYSVEO is an open source RPAS integrator for flight professionals. Their project is based on a CNES patent which will be used in order to develop real time augmented reality software. This software is able to superimpose an end-user made image into video streams produced by the RPAS sensor. The RPAS operator will therefore have the possibility to analyze the data in real time so as to adapt RPAS flight operations in more time and cost-efficient ways.
