

The ESA BIC Sud France opened in 2013 and is managed by Aerospace Valley. The center is located in three regions in the south of France (Nouvelle Aquitaine, Occitanie, PACA) , offering entrepreneurs support and technical expertise for the the creation of innovative start-ups. ESA BIC Sud France is composed of the following members providing the best support to business creators: Six support structure: ESTIA Entreprendre, Bordeaux Technowest, CEEI Théogone, Midi-Pyrénées Incubator, BIC Montpellier Méditerranée Métropole and PACA-Est Incubator Two aerospace competitiveness clusters: Aerospace Valley and Safe The French Space Agency : CNES.

The challenge

IIDRE has designed an integrated service (going from the hardware design to interpreter software) for real time as well as asynchronously visualization of data connected to indoor positioning systems. This service called INEO-GEO is based on a cumulative use of new technologies such as ZigBee. Another project called GALINEO follows INEO-GEO principles while increasing momentum through combining different solutions for real-time automatic and seamless cover of indoor-outdoor positioning

The solution
