

The ESA Business Incubation Centre in Darmstadt, Germany, was founded in 2007 and is managed by Centrum für Satellitennavigation Hessen (cesah). The centre offers business start-up support as well as technical expertise in different space related areas, and in particular in satellite navigation, data systems, software systems and navigation test environments.

## About PosiTim UG (haftungsbeschränkt)

PosiTim is focused on solutions and services for the high accuracy GNSS market. We are experts in satellite navigation and with high accuracy we mean millimeters! Anyone who has worked with high accuracy GNSS software like the NASA software Gipsy or the Bernese GPS software package knows that it requires a significant effort and profound knowledge and understanding in order to be able to use the software packages. We overcome these hurdles!

## The challenge

To be updated

## **The solution**

Our service is the help to get your high accuracy GNSS solutions up and running. This means we do the full installation and configuration of the software so that you can generate your solutions by just pressing the button. But our services go much further than that. We provide extensive training, on request even on-site, and make sure that the software and its configuration remains up to date. Another part of our service portfolio is that we can also offer to compute the solutions for you, saving you all the trouble of setting up and running a high accuracy GNSS solution. We generate your solutions, which is what we do best, and you do with them what you do best! Besides our full service portfolio we also provide fully tailored turn-key solutions.
