About Embia GmbH

Embia together with SKILLsoftware GmbH provides solutions for visual and structured databases. We focus on mobile and serverbased (Cloud) systems and offer indoor and outdoor positioning systems for airports and trade fairs, new solutions for mobile construction documentation and construction management, as well as digital guidance systems. The software runs on all common systems.

The challenge

Embia and SKILLsoftware GmbH developed the mobile and server based Application SKILLbaudoc. The user can enter each defect, activity input or maintenance to a

tabletPC onsite, photographs included. After synchronization with the SQL database all information, the process status with all information is available to every responsible person. This application is created for construction-, facility- and property manager as well as for each operative working person, who has to manage and document processes outside the bureau and mobile. Further application areas are insurances, energy efficiency, certification, assessment. The intuitive and digital database in the background allows the overview of all activities or information about a project.

The solution

ANLU Navigation GmbH is hosted at ESA Business Incubation Centre (BIC) Darmstadt, run by the German company cesah. This has provided the opportunity to consult ESA experts who have supported with technology insights and ideas to improve the system. In addition, especially the support provided by cesah in relation to general business activities has been very helpful.
