

ESA Business Incubation Centre in Noordwijk, The Netherlands, was opened in 2004 and is managed by SBIC Noordwijk B.V. The centre offers business start-up support as well as technical expertise in most areas of space technology and know-how. Located at the Space Business Park near to ESTEC, the largest ESA site and the scientific and technical heart of ESA, ESA BIC Noordwijk promotes the exchange of knowledge between advanced technology and space activities, as well as the exchange of technology and expertise between space programmes and terrestrial applications.

RELEGS BV

Bring a medical class IIa device on the market for the treatment of Restless Legs Syndrome (RLS)

About RELEGS BV

Restless Legs Syndrome (RLS) is a chronic sensorimotor disorder characterized by unpleasant sensations in the legs and the compelling need to move the legs. We develop and design a small device, where we take into account the activity of RLS patients and ergonomics for the different RLS postures and situations.

The challenge

By implementing space technology, we are able to develop a robust non-pharmacological

medical Class IIa device with high safety and reliability electronic design.

The solution

A small device providing a non-pharmacological solution to relieve RLS symptoms in every RLS triggering posture and situation:

- In bed: For a good night sleep;
- In (movie)theatre: To enjoy the play/movie;
- In airplane/car: For a comfortable flight/journey.
