

The ESA Business Incubation Centre in Harwell, UK, started its operations in 2011 and is managed by the Science and Technology Facilities Council (STFC). It is located at Harwell Campus, a world leading science, technology and business campus based in South Oxfordshire with more than 4,500 researchers, engineers and innovators from over 150 high-tech organisations, and a focal point and cluster for the UK's rapidly growing high-tech space community.

About Seecycle

SeeCycle combines hardware and software to create an invisible field of protection around heavy vehicles for cyclists. People want to be healthier and help protect the environment by cycling more, but there is one major and valid concern - safety. By alerting drivers of heavy vehicles when a cyclist is in a blind spot they can react appropriately, creating a safer journey for both road users and potentially saving lives.
