

The ESA Business Incubation Centre (BIC) Lazio in Italy was founded in 2005 and is managed by the Italian company BIC Lazio SpA. ESA BIC Lazio offers business start-up support as well as technical expertise throughout their incubation period in a number of space related areas. It is located at the business incubator ITech in Rome, Italy, which is situated near the European Space Research Institute (ESRIN) in Frascati, Italy.

## The challenge

The business idea is to leverage the know how and technology developed by ESA in the Geospatial data handling field and in particular by ongoing initiatives related to data

standardisation and interoperability.

## **The solution**

B-Open designs, develops and integrates solutions for the production, management, processing and exploitation of geographical data. In the screenshot, a webGIS solution integrating information and data from different sources.

Solutions :

Remote Sensing and Earth Observatio - Excellence in creating value added products from SAR and optical imagery.

Environmental Monitoring and Reporting - Custom designed national and international environmental reporting systems.

Geospatial data analysis - Full stack management of geospatial data from the sensor to the publication and analysis.
