## Incubation period

01-01-2021 to 24-11-2021

space solutions

## About NaviBlind

NaviBlind enables blind and visually impaired people to walk to any destination, like any other person. Their solution is an aid that consists of an app and a high-precision GNSS system. The aid allows users to safely walk from A to B through busy urban environments, something that has previously only been possible through rigorous one-to-one training with a professional instructor.
