

ESA Business Incubation Centre in Noordwijk, The Netherlands, was opened in 2004 and is managed by SBIC Noordwijk B.V. The centre offers business start-up support as well as technical expertise in most areas of space technology and know-how. Located at the Space Business Park near to ESTEC, the largest ESA site and the scientific and technical heart of ESA, ESA BIC Noordwijk promotes the exchange of knowledge between advanced technology and space activities, as well as the exchange of technology and expertise between space programmes and terrestrial applications.

About swyMed

We see a day when every doctor and therapist uses swyMed Live Video Medicine to overcome boundaries to care and relationships, whether by physical location or bandwidth. Every patient has the right to care when needed even when hours away from their hospital. Doctors have a right to provide the best care to their patients. This level of access for doctors and patients ultimately makes healthcare more efficient and financially sustaining.

The challenge

Clarify the problem that your products/services tackle, explain your product fields in general, state your targeted industries/markets, give information about your strategy.

The challenges may be different enough in Europe to promote something different, although likely include the new issues of regional hospitals shutting down or becoming specialized, bandwidth and network instability, interoperability issues with other digital healthcare solutions already implemented, and the rampant costs of providing care.

The solution

Explanation of your solutions (product / service provided), description of how it solves identified problems, who do you cooperate with, what did the technical support contribute.

We provide the clinically-focused video medicine software that is used to provide care from the moment a patient enters the medical system till they are released for home monitoring, if needed. This is made possible with partners like MaxLife, enabling the initial care to be at home or an emergency site via mobile clinic cases or video medicine-enabled ambulances, through the hospital system internally, with PACS and EMR integrations, and back out of the system via our own home health set-top box for chronic care, elderly, or distantly remote patients.
