

The ESA Business Incubation Centre in Harwell, UK, started its operations in 2011 and is managed by the Science and Technology Facilities Council (STFC). It is located at Harwell Campus, a world leading science, technology and business campus based in South Oxfordshire with more than 4,500 researchers, engineers and innovators from over 150 high-tech organisations, and a focal point and cluster for the UK's rapidly growing high-tech space community.

GeoCento

GeoCento is working to make satellite images of the Earth accessible to professionals.

About GeoCentro

Geocento is developing simple, configurable web services, underpinned by access to imagery from an unrivalled range of image suppliers, to enable multiple markets to benefit from imagery.

The challenge

Although major growth is taking place in the quantity and variety of imagery that is

available to markets such as oil and gas and insurance, these markets lack easy to use tools to ingest imagery into their operations, from image discovery, to ordering, access and visualisation.

The solution

Geocento sees major scalable business in being able to provide access to imagery from the wide range of suppliers through multiple, simple webservices each addressing common user cases. These webservices can be incorporated directly into third party operations and services, thus providing deep access to markets, and for users they reduce significantly the overheads of time and expertise needed when users attempt to deal with suppliers directly.
